How Healthcare Professionals May Support 5210 Healthy Children

5210 Healthy Children is a community-wide plan to improve child health. It spreads a common message throughout children’s communities, where families work, live, and play. The message represents four healthy behaviors children should achieve each day:

5 or more servings of fruits and vegetables
2 or fewer hours of recreational screen time*
1 or more hours of physical activity
0 sweetened beverages

*review guidelines on parenting strategies to ensure quality screen time (AAP, 2015)

Healthcare professionals are natural allies for the 5210 Healthy Children campaign. They may help reinforce the 5210 message from a clinical perspective, lend their expertise to the campaign, and show their support for 5210 activities throughout their communities. The resources assembled in this toolkit are designed to help healthcare professionals promote and support the 5210 message.

The following materials are available for healthcare professionals:

1. **Tips for Healthcare Professionals handout** – targets leaders, and provides them with tips to help children in their community increase fruit and vegetable consumption, reduce screen time, increase physical activity, and decrease sweetened beverage consumption.
2. **Tips for Healthcare Professionals posters** - enlarged versions of the Tips for Healthcare Professionals handout are available in two sizes (27” x 40” and 38” x 56”) to hang in highly-visible locations.
3. **Definitions & Recommendations handout** – explains the 5210 message and its research basis.
4. **Creating a Healthy Office Environment handout** – lists simple ideas to promote healthy eating and active living by thinking about the office environment of your clinic.
5. **Healthy Eating and Healthy Activity Booklists** – provide examples of books for children with content that reinforces the importance of a healthy lifestyle.
6. **Thirst Quencher! Poster** – advertises drinking fountain locations.
7. **How a Clinical Practice May Begin Using 5210 Healthy Children** – describes how to make easy modifications to standard medical visits to address 5210 in the context of child health.
8. **Measuring Weight & Length and Measuring Height and Weight** – describe best-practice techniques to standardize the collection of height/length and weight measurements for BMI assessment.
9. **5210 Healthy Habits Questionnaires** – a brief form for parents or patients (depending on their age) to fill out so the practitioner has an at-a-glance look at their health behaviors and initiate motivational interviews to elicit behavior change.

This material is based upon work supported by the National Institute of Food and Agriculture, U.S. Department of Agriculture, and the Office of Family Policy, Children and Youth, U.S. Department of Defense under Award No. 2010-48709-21867 developed in collaboration with The Clearinghouse for Military Family Readiness at Penn State University. 5210 Healthy Children is adapted from Let’s Go! www.letsgo.org.
10. **Information about motivational interviewing** – an introduction to the concept of motivational interviewing, why it is good to use in clinical practices, how to conduct motivational interviews to elicit behavior change, and a readiness ruler to ask patients how ready they feel to make changes to their health behaviors.

11. **5210 and Healthy Sleep handout** – lists ways that the 5210 behaviors support healthy sleep habits in children.

We recommend hanging the poster in highly-visible locations in the medical office, such as in the waiting area, in the restrooms, and in the clinical exam rooms. In addition, we advise reviewing all of the documents with healthcare staff to provide standardized care to children and adolescents that supports the 5210 Healthy Children campaign. Parent handouts are available in the 5210 Healthy Children toolkit that may be distributed to children and their families in the context of medical appointments or made available in the waiting area. Digital versions of all materials are available and may be inserted into newsletters or emails, and uploaded to websites and via social media.

For more information, visit the Clearinghouse for Military Family Readiness at Penn State online at [www.militaryfamilies.psu.edu](http://www.militaryfamilies.psu.edu) or call 1-877-382-9185. We will be happy to answer your questions!
Tips for Healthcare Professionals

5 or more servings of fruits and vegetables
Educate the families in your care about nutrition recommendations for children and the importance of incorporating a variety of fruits and vegetables into their child’s diet – regardless of their child’s weight status. Provide support to help families apply their knowledge – use motivational interviewing to help them identify barriers preventing them from serving or eating fruits and vegetables, help them problem solve ways to overcome those barriers, and encourage them to set realistic goals they can monitor to improve their fruit and vegetable intake over time.

2 or fewer hours of recreational screen time
+ review guidelines on parenting strategies to ensure quality screen time (AAP, 2015)
Teach youth and caregivers that recreational screen time is free time spent in front of screens – like televisions, video games, and the internet – and that it is possible to get enough physical activity and still engage in an unhealthy amount of screen time.

1 or more hours of physical activity
Explain age-specific physical activity recommendations to your patients and their caregivers. Use motivational interviewing to help empower ALL family members to be more active – and have fun at the same time!

0 sweetened beverages
Help children and caregivers understand the importance of drinking fluids to stay healthy while avoiding the extra sugar and calories from sweetened beverages. Coach them to look out for drinks with sugar, honey, syrup (e.g., corn syrup, brown rice syrup), sweetener, and/or ingredients ending in “ose” (e.g., glucose, dextrose).

- Support a healthy introduction of solid food, which includes promoting exclusive breastfeeding for six months and explaining neophobia to caregivers so they know to expose young children to new fruits and vegetables repeatedly!
- Promote healthy eating behaviors – teach caregivers how to recognize hunger and fullness cues; encourage them to make nutritious foods available at regular times and allow children to choose whether and how much to eat; and deter caregivers from restricting access to palatable foods, using foods as rewards and punishments, and coercing children to eat.
- Consider hosting a farmers’ market at your healthcare center to increase patient access to fruits and vegetables and send the message that nutrition is important for good health!
- Urge parents to remove screens from children’s bedrooms and turn off phones and TVs during mealtimes. Explain that children under two years should have NO screen time.
- Promote National Screen-Free Week, usually in early May, in your healthcare center. See www.screenfree.org for details.
- Ask youth to brainstorm active ways to spend their free time. Consider compiling a master list of responses from children in different age groups and making it available to all.
- Encourage using activities instead of foods as incentives – a trip to the park, sledding hill, or community pool is a great alternative to the pizza shop to celebrate a job well done!
- Consider keeping a list of activities available for youth in your community and distributing it to your patients.
- Promote stair use in your healthcare center – increase appeal with colorful paint, carpeting, music, and artwork.
- Encourage caregivers to make water the norm for quenching thirst by drinking water when thirsty and offering water to thirsty children.
- Present the idea that nonfat and 1% milk and 100% fruit and vegetable juices contain beneficial nutrients and calories – they are healthy foods that promote a nutritious diet; they are not beverages to drink when thirsty.
- Lead by example – drink water yourself and make it freely available to visitors in your healthcare center!

Contact the Clearinghouse for Military Family Readiness at 1-877-382-9185 or www.militaryfamilies.psu.edu for help identifying programs and resources targeting nutrition, physical activity, and screen time!

This material is based upon work supported by the National Institute of Food and Agriculture, U.S. Department of Agriculture, and the Office of Family Policy, Children and Youth, U.S. Department of Defense under Award No. 2010-48709-21867 developed in collaboration with The Clearinghouse for Military Family Readiness at Penn State University. 5210 Healthy Military Children is adapted from Let’s Go! www.letsgo.org.

Definitions & Recommendations

5 or more servings of fruits and vegetables

One serving of fruits and vegetables is:
1 medium fruit
½ cup of chopped, canned, or cooked fruit
¼ cup of dried fruit
1 cup of raw leafy greens
½ cup of raw or cooked vegetables
½ cup of 100% fruit or vegetable juice

The Dietary Guidelines for Americans 2010 provide the following recommendations:
• Increase fruit and vegetable intake.
• Eat a variety of vegetables, especially dark-green, red, and orange vegetables, and beans and peas.

The American Academy of Pediatrics has the following recommendations for consuming fruit juice:
• Do not give juice to infants younger than 6 months.
• Limit juice to 4-6 oz per day in children 1 to 6 years.
• Limit juice to 8-12 oz per day in children and adolescents 7 years and older.
• Fruit juice offers no nutritional benefits over whole fruits, and whole fruits provide fiber and other nutrients.

The United States Department of Agriculture recommends that half of a person’s plate should be fruits and vegetables. This recommendation is reflected on the current U.S. Food Guidance System, MyPlate, which is shown to the left.

2 or fewer hours of recreational screen time

Recreational screen time is free time spent sitting or reclining in front of televisions, computers, tablets, and similar screens.

Children will engage in screen time as fully as they do in any other activity and screen time can have its positive and negative effects. So, the American Academy of Pediatrics makes these recommendations:
• Become involved in children’s media use and set limits around screen time.
• Help children learn to distinguish and choose programs that contain quality content.
• Become role models for children, demonstrating the value of productive time spent away from screens.
• Attempt to keep children under the age of 2 years away from screens entirely.

Physical activity is any movement of the body that raises one’s heart rate above resting.

Structured physical activities are planned, and unstructured physical activities are free-play.

Aerobic physical activities involve moving large muscle groups. Moderate and vigorous aerobic activities make a person’s heart, lungs, and muscles work noticeably harder. Examples include bicycling, swimming, and playing chasing games, like tag.

Muscle-strengthening physical activities include climbing and swinging on playground equipment, doing sit-ups and push-ups, and resistance training.

Bone-strengthening physical activities create an impact on bones, such as hitting a tennis ball, jumping rope, or practicing gymnastics.

For children 5 years and younger, the National Association for Sport and Physical Education¹ has developed the following recommendations:

- **Infants under 12 months of age** should engage in structured and unstructured physical activities each day that are devoted to exploring movement and developing motor skills.
- **Toddlers (12 to 36 months old)** should engage in structured physical activities for at least 30 minutes per day plus unstructured physical activities for at least 60 minutes (and up to several hours) per day.
- **Preschoolers (3 to 5 years old)** should engage in structured physical activities for at least 60 minutes per day plus unstructured physical activities for at least 60 minutes (and up to several hours) per day.

For children and adolescents 6 years and older, the U.S. Department of Health and Human Services² provides the following recommendations:

- **Children and adolescents (6 to 17 years old)** should engage in 1 hour of physical activity per day.
  - Most of the 1 hour should be moderate- or vigorous-intensity aerobic physical activities.
  - Muscle-strengthening physical activities should be included at least 3 days per week.
  - Bone-strengthening physical activities should be included at least 3 days per week.

Researchers from the Robert Wood Johnson Foundation Healthy Eating Research program¹ made the following conclusion following an examination of current evidence:

- Reducing sweetened beverage intake “would have no negative effect on children’s health and would reduce the risk of childhood obesity and many other health problems, including type 2 diabetes, poor nutrition, excess caffeine consumption, and dental decay.”

For more information on healthy eating and physical activity, visit [www.letsgo.org](http://www.letsgo.org).
The physician’s office is a worksite that can be a powerful tool to communicate healthy eating and active living messages.

- Hang physical activity and nutrition posters in waiting areas and in examination rooms; make them as prominent as vaccination posters
- Create a 5-2-1-0 bulletin board:
  - Monthly or quarterly updates can feature patient activities in their communities
  - Post resources and news articles for parents and children
  - Post seasonal activities
  - Feature a fruit or vegetable of the month
- Play videos that show children taking part in nontraditional sports and other physical activities
- Play videos of children trying new fruits and vegetables
- Display books, puzzles and activity sheets that support healthy eating and active living to entertain children
- Replace lollipop and candy rewards with stickers, bookmarks and other nonfood items
- Incorporate WiiFit or other active video games

Work with your staff to make healthy eating and active living a part of their lives.

- Sample a fruit or vegetable of the month—select items of different cultures to try
- Host a healthy lunch
- Provide 10-minute physical activity or walk break during the work day

On market day, a farm family experiences all the fun and excitement of going to and from the farmers’ market.

In this version of the traditional tale, the duck, the dog, and the cat refuse to help the Little Red Hen make a pizza but do get to participate when the time comes to eat it.

Staring at the fish soup he doesn’t want to eat, Victor imagines that he is on an island of overgrown celery where he conquers a fierce pepper dragon only to be barraged by a wealth of terrifying ingredients, and soon Victor unexpectedly discovers that the dreaded fish soup is quite delicious.

Numbers from one to ten are used to tell how members of a family shop and work together to prepare a meal.

Little ones can join their host Grover and his assistant Elmo in the Good Eats Cafe where they will learn all about good nutrition and healthy eating!

Little Pea hates eating candy for dinner, but his parents will not let him have his spinach dessert until he cleans his plate, in a story that many children can relate to!

Little Critter learns that a healthy lifestyle includes a balanced diet and exercise.

After planting the garden he has dreamed of for years, Mr. McGreely tries to find a way to keep some persistent bunnies from eating all his vegetables.

A harried waitress at the local diner tries to keep up with an abundance of orders from demanding patrons—all of whom want eggs, in a lively introduction to similarities and differences.

An orange begins its life as a blossom where bees feast on the nectar, and reaches the end of its journey, bursting with the seasons inside it, in the hands of a child.
### Blueberries for Sal
by McCloskey, Robert
- **Paperback**: $7.99
- **Age**: 6-7
- **ISBN**: 014050169X

Little Bear and Sal both go berrying with their mothers, but after sitting down to rest, they each end up following the other one’s mother.

### I Will Never Not Ever Eat a Tomato
by Child, Lauren
- **Paperback**: $6.99
- **Age**: 6-7
- **ISBN**: 0763621803

Fussy eater Lola makes it perfectly clear that she will not eat anything she doesn’t want until her brother shows her that carrots are really orange twiglets from Jupiter and mashed potatoes are actually Mount Fuji cloud fluff.

### The Edible Pyramid
by Leedy, Loreen
- **Paperback**: $6.95
- **Age**: 6-7
- **ISBN**: 0823420752

Animal characters learn about good eating every day in a restaurant called The Edible Pyramid, where the waiter offers the foods grouped in sections of the Food Guide Pyramid and customers learn how many servings they need each day.

### The Seven Silly Eaters
by Hoberman, Mary Ann
- **Paperback**: $7.00
- **Age**: 6-7
- **ISBN**: 0152024409

Seven fussy eaters find a way to surprise their mother.

### How to Make an Apple Pie and See the World
by Priceman, Marjorie
- **Paperback**: $6.99
- **Age**: 6-8
- **ISBN**: 0679880836

Since the market is closed, the reader is led around the world to gather the ingredients for making an apple pie.

### The Sweet Tooth
by Platini, Margie
- **Hardcover**: $16.95
- **Age**: 6-8
- **ISBN**: 0689851596

Stewart’s loud, obnoxious sweet tooth constantly gets him into trouble, until Stewart uses a healthy diet to take control of the situation.

### Cloudy With a Chance of Meatballs
by Barrett, Judi
- **Paperback**: $6.99
- **Age**: 7-10
- **ISBN**: 0689707495

Life is delicious in the town of Chewandswallow where it rains soup and juice, snows mashed potatoes, and blows storms of hamburgers—until the weather takes a turn for the worse.

### Gregory, the Terrible Eater
by Sharmat, Mitchell
- **Paperback**: $4.99
- **Age**: 7-8
- **ISBN**: 0590433504

Mother Goat, alarmed by Gregory’s bizarre dietary preferences—he prefers toast and scrambled eggs to shoe boxes and tin cans—consults Dr. Ram, who devises an appetizing transitional diet for little Gregory.

### Sun Bread
by Kleven, Elisa
- **Paperback**: $6.99
- **Age**: 7-8
- **ISBN**: 0142400734

During the dreary winter, a baker decides to bring warmth to her town by baking bread as golden and glorious as the sun itself.

### Everybody Cooks Rice
by Dooley, Norah
- **Paperback**: $6.95
- **Age**: 7-9
- **ISBN**: 0876145918

A child is sent to find a younger brother at dinnertime and is introduced to a variety of cultures through encountering the many different ways rice is prepared at the different households visited.

### Good Enough to Eat
by Rockwell, Lizzy
- **Paperback**: $6.99
- **Age**: 7-9
- **ISBN**: 0064451747

Describes the six categories of nutrients needed for good health, how they work in the body, and what foods provide each.

### Why Do People Eat?
by Needham, Kate
- **Paperback**: $4.99
- **Age**: 7-9
- **ISBN**: 0794516238

Using simple text and illustrations, explains why people need food, where food comes from, and how the body uses it.

THIRST QUENCHER

A healthy body needs water. FILL UP!

5210 Every Day!

5210 Healthy Children

LET'S GO!

www.letsgo.org
1. **The focus is on healthy behaviors.**
   It’s important to remember the focus should be on healthy behaviors and NOT on the weight. Healthy behaviors include 5-2-1-0, plus setting structured mealtimes, eating less fast food, and getting enough sleep.

2. **The 5-2-1-0 Healthy Habits Questionnaire.**
   The first thing to institute in your practice is this questionnaire at all well-child checks for children 2 years and older. Questions to consider:
   - When and where will the survey be handed out?
   - Who will the patient/parent give the survey back to?
   - Where will the survey be placed in the chart?

3. **Goal setting with patients and families.**
   It’s important to have patients and families work on one area at a time. Simple, easily attainable goals are the key to success. An example is reducing intake of sugar-sweetened beverages.

4. **Parent information.**
   It’s important to have information for parents on how they can make simple changes in their lives to be healthier. The 5210 Healthy Children toolkit has many handouts available for your patients and their families. Questions to consider:
   - What handouts are you going to use?
   - Where will the handouts be stored/displayed?
   - Who is responsible for ordering/stocking handouts?

5. **Measuring BMI can be complicated.**
   Here are some things to consider:
   - How does your office currently measure patients’ height and weight? Who does the measuring? Is it standardized throughout the office?
   - Can the person who does the measuring also calculate the BMI and determine the BMI percentile and weight classification? (Usually one person does all of this.)
   - Where will the BMI percentile and weight classification be documented?
   - Are the appropriate staff members trained in BMI calculations and documentation?

6. **The language we use is very important when working with patients and families on healthy behaviors.**
   First ask permission and then focus on positive, healthy behaviors, not on the weight.
   - A BMI of less than 5% is medically termed “underweight”.
   - □ Instead of using the term “underweight”, try saying, “Your child may not be getting enough calories every day.”
   - □ Ask the child about his/her daily eating habits.
Discuss the 5-2-1-0 behaviors and encourage healthy eating habits.

If you think it is applicable, you could begin the conversation around a positive body image.

- A BMI of 5-84% is medically termed “healthy weight”. It is still important to talk about healthy behaviors with this group.
- A BMI of 85-94% is medically termed “overweight”.
  - Instead of using the term “overweight”, try reviewing the BMI growth chart with the child/parent. Use wording such as “Your child might be carrying a little extra weight. It might not mean he/she has extra fat.”
  - Quickly steer the conversation to the 5-2-1-0 behaviors.
  - Ask the child/parent if there is one behavior they would like to work on.
  - Use the survey to help elicit interest.
  - If they are not interested in making a change now, stay positive and encourage them to pick a behavior to start thinking about.
- A BMI of 95% and above is medically termed “obese”.
  - Instead of using the term “obese”, try “Your child has put on more weight than they have grown tall,” or “Your child is carrying around extra weight and this can put them at risk for health conditions such as heart disease and diabetes.”
  - Once again, quickly move the discussion to healthy behaviors.

7. **It’s important to set a good example.**

   Practices can set a good example by having healthy snacks available for office staff and avoiding junk food and soda.

8. **Potential limitations on the use of the BMI. BMI does not directly measure fat, it measures weight.**

   That said there have been numerous studies determining BMI to be a good screening tool to identify children who have an increased percentage of body fat and who are at risk for medical conditions, such as heart disease and diabetes.
Measuring Weight

Children should be weighed using a platform scale. This may be a beam balance scale or a digital (electronic load cell or strain gauge) scale. Check your equipment regularly to make sure you are getting accurate measurements. Scales should be calibrated on a routine basis. Calibration involves putting known weight on the scale to check accuracy. Be sure the scale is placed on a flat, uncarpeted floor.

Procedure:
1. Ask the child to remove shoes and bulky clothing.
2. Place the scale in the “zero” position before the child steps on the scale.
3. Ask the child to stand still with both feet in the center of the platform.
4. Record the measurement to the nearest decimal fraction.
5. Have the child step off the scale.

Measuring Height

A standing height board or stadiometer is required. This device has a vertical ruler with a sliding horizontal rod that adjusts to rest on the head. It also has a permanent surface to stand on or the entire device is mounted on the wall of a room with a level floor.

Procedure:
1. Before you begin, ask the child to remove shoes, hats, and bulky clothing, such as coats and sweaters. Ask the child to remove or undo hair styles and hair accessories that interfere with taking a measurement. In rare cases, a child may be unwilling to undo an intricate or costly hairstyle. In these situations, care should be taken to locate the actual crown of the head.
2. Direct the child to stand erect with shoulders level, hands at sides, thighs together, and weight evenly distributed on both feet. The child’s feet should be flat on the floor or foot piece, with heels comfortably together and touching the base of the vertical board. There are four contact points between the body and the stadiometer: head, upper back, buttocks, and heels.
3. Ask the child to adjust the angle of his/her head by moving the chin up or down in order to align head into the Frankfort Plane. The Frankfort Plane is an imaginary line from the lower margin of the eye socket to the notch above the tragus of the ear (the fleshy cartilage partly extending over the opening of the ear). This is best viewed and aligned when the viewer is directly to the side of and at the eye level of the child. When aligned correctly, the Frankfort Plane is parallel to the horizontal headpiece and perpendicular to the vertical back piece of the stadiometer. NOTE: When the chin is correctly positioned, the back of the head may not make contact with the board. In fact, in a very few individuals, only two points will make contact with the vertical back piece.
4. Ask the child to breathe in and maintain his/her position. Lower the headpiece until it firmly touches the crown of the head and is at a right angle with the measurement surface. Check contact points to ensure that the lower body stays in the proper position and the heels remain flat. Some children may stand up on their toes, but verbal reminders are usually sufficient to get them in proper position.
5. Record height to the nearest 1/8th of an inch.

Adapted from the Center for Weight and Health at the University of California, Berkeley.
Patient Name: _________________________________________________________  
Age: __________  Today’s Date: __________

1. How many servings of fruits or vegetables does your child eat a day?  
   One serving is most easily identified by the size of the palm of your child’s hand.

2. How many times a week does your child eat dinner at the table together with the family?

3. How many times a week does your child eat breakfast?

4. How many times a week does your child eat takeout or fast food?

5. How many hours a day does your child watch TV/movies or sit and play video/computer games?

6. Does your child have a TV in the room where he/she sleeps? Yes ☐ No ☐

7. Does your child have a computer in the room where he/she sleeps? Yes ☐ No ☐

8. How much time a day does your child spend in active play (faster breathing/heart rate or sweating)?

9. How many 8-ounce servings of the following does your child drink a day?  
   100% Juice ______  Fruit drinks or sports drinks ______  Soda or punch ______  
   Water ______  Whole milk ______  Nonfat or reduced fat milk ______

10. Based on your answers, is there ONE thing you would like to help your child change now? Please check one box.
   - ☐ Eat more fruits & vegetables.
   - ☐ Take the TV out of the bedroom.
   - ☐ Play outside more often.
   - ☐ Switch to skim or low fat milk.
   - ☐ Spend less time watching TV/movies and playing video/computer games.
   - ☐ Eat less fast food/takeout.
   - ☐ Drink less soda, juice, or punch.
   - ☐ Drink more water.

Please give the completed form to your clinician. Thank you.
5210 Healthy Habits Questionnaire (Ages 10–18)

We are interested in the health and well-being of all our patients. Please take a moment to answer the following questions.

Patient Name: ___________________________________________________________  Age: ________  Today’s Date: ________

1. How many servings of fruits or vegetables do you eat a day? (One serving is most easily identified by the size of the palm of your hand.)

2. How many times a week do you eat dinner at the table together with your family?

3. How many times a week do you eat breakfast?

4. How many times a week do you eat takeout or fast food?

5. How many hours a day do you watch TV/movies or sit and play video/computer games?

6. Do you have a TV in the room where you sleep?  Yes ☐  No ☐

7. Do you have a computer in the room where you sleep?  Yes ☐  No ☐

8. How much time a day do you spend in active play (faster breathing/heart rate or sweating)?

9. How many 8-ounce servings of the following do you drink a day?  
   _____100% juice  _____Fruit or sports drinks  _____Soda or punch  
   _____Water  _____Whole milk  _____Nonfat (skim), low-fat (1%), or reduced-fat (2%) milk

10. Based on your answers, is there ONE thing you would be interested in changing now? Please check one box.

   □ Eat more fruits and vegetables.
   □ Take the TV out of the bedroom.
   □ Play outside more often.
   □ Switch to nonfat (skim) or low-fat (1%) milk.
   □ Spend less time watching TV/movies and playing video/computer games.
   □ Eat less fast food/takeout.
   □ Drink less soda, juice, or punch.
   □ Drink more water.

Please give the completed form to your clinician. Thank you.
What is Motivational Interviewing?

Motivational Interviewing (MI) is a guiding style of communication that provides patients with the opportunity to create change in behaviors by providing a non-judgmental atmosphere. This atmosphere invites patients to consider making changes in their behaviors and elicits intrinsic motivation for change (as opposed to providers telling patients what they must change). (Miller & Rollnick, 2002).

MI is a paradigm shift for many of us, especially those trained in a prescriptive style of communication. We engage in MI as we dialogue with people about many areas of behavior change. MI is not a technique, and it is not a switch that we turn on and off. We talk about the “Spirit of Motivational Interviewing” which includes the following:

- Person-centered approach;
- Invitation to a collaborative partnership between patient and provider;
- Listening more than telling:  
  - eliciting information rather than instilling;
- Placing the responsibility for change with the patient and not the provider;
- Being respectful:  
  - asking permission,  
  - honoring autonomy,  
  - resourcefulness, and  
  - providing the ability to choose or make decisions;
- Avoiding coerciveness;
- Increasing intrinsic motivation through thoughtful dialogue and careful listening.
Why Use Motivational Interviewing?

There are several reasons to use Motivational Interviewing (MI); the most compelling however, are research outcomes:

- Through this research, we know that MI plus “active treatment” works exceptionally well.

Active treatment can include MI plus:

1. Nutrition education
2. Physical therapy
3. Exercise program/support
4. General health education

- We also know that there is a larger effect size (i.e. works better with) with minority samples than with Anglo/White samples. We think this outcome is true because

  1. MI is congruent with cultural values of many minority populations.
  2. The power hierarchy is diminished when engaging in MI.

- We also know that the very first meeting matters and that MI can make a difference in just one 15-minute interaction.
**Practitioner Barriers to Utilizing Motivational Interviewing Within the Day-to-Day Health Care Setting**

<table>
<thead>
<tr>
<th>Barriers/Concerns</th>
<th>Suggestions/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>I have a checklist of things to get through during my patient visits – how can I incorporate MI in such a short amount of time?</td>
<td>Finish everything on the checklist first. Then start using MI. As you get more practice with MI, it becomes easier to incorporate MI into all aspects of the visit.</td>
</tr>
<tr>
<td>How can I effectively give the patient information I deem important while also doing MI?</td>
<td>Using both MI and active treatment (nutrition info, physical therapy, etc.) has proven to be quite effective. Aspects of MI are not always appropriate, and you should use your clinical judgment when determining if instruction should be used.</td>
</tr>
<tr>
<td>I’ve been a practicing physician for 20 years and I have a certain way of doing things. How can I start including MI now?</td>
<td>Though it is hard to change our routine habits, it is best to start slow and work towards incorporating MI at your visit. It doesn’t have to happen all at once!</td>
</tr>
<tr>
<td>My patients don’t want to make these decisions. They are coming to me for expert advice and direction.</td>
<td>Some patients are not receptive to MI, so it is important to understand their expectations when they come in for a visit. Though you may be the clinical expert, they are the expert on themselves. It is best to work together by joining your clinical expertise and their personal knowledge.</td>
</tr>
<tr>
<td>MI takes too much time.</td>
<td>MI does not really take any longer than other visits and the first visit is always the most important. Patient outcomes can be influenced in the first 15 minutes of a visit.</td>
</tr>
<tr>
<td>MI leaves too much of the process up to the patient – I need to make sure that they actually change so they can get healthier.</td>
<td>It is not your responsibility to make the changes. You are there to facilitate the process. Your role is to help the patient identify the problem. If they identify it, then they usually feel responsible to change. If you identify it, however, they are more likely to resist and make excuses for their behaviors.</td>
</tr>
<tr>
<td>When using MI, patients see it as talking down to them.</td>
<td>MI is a genuine practice – it is not about convincing people or about tricking them into doing something. Patients know you have an agenda, so it is best to practice transparency. After all, isn’t your agenda to foster a healthier patient population? Try to get the patients involved by giving them options and truly listening to their concerns.</td>
</tr>
</tbody>
</table>
Scene: Provider Office
Characters: Provider and Overweight Adolescent

Greetings and small talk

Provider: Your weight continues to gradually climb. If this keeps up, you’ll be at risk for serious complications like diabetes and heart disease. Do you understand how important it is to change your lifestyle?

Adolescent: Yes, I do, but it’s really hard.

Provider: Now is the time to make changes. You need to increase your physical activity levels and eat healthier foods. You should be getting at least one hour of physical activity every day.

Adolescent: Okay.

Provider: Here are some handouts about the importance of physical activity and healthy foods.

Adolescent: Okay. *sigh*
Example of Office Encounter: Using Motivational Interviewing

Scene: Provider and overweight adolescent.
Part of a Well-Child visit
Time: < 3 minutes

Physician: Do you mind if we take a few minutes to discuss ways to stay healthy and energized?
Adolescent: Okay.

Physician: How do you feel about your health and energy levels?
Adolescent: Alright, I guess. I know I’m overweight, but I’m just not sure what to do about it. People always tell me to eat more vegetables, but I don’t like them. Also, I don’t usually have a lot of energy.

Physician: Ah, so you know you are overweight and your energy levels are low.
Adolescent: Yeah.

Physician: Would you be interested in learning about ways to achieve a healthy weight and have more energy?
Adolescent: I guess so. As long as it’s not just “Eat more vegetables”.

Physician: Sure. Let’s explore some different things. One thing that is often associated with overeating and sedentary behavior is screen time. Could we talk about that?
Adolescent: Okay. What do you mean by screen time?

Physician: I mean TV, movies, videos games and computer.
Adolescent: Ah, yes. I watch a lot of TV.

Physician: Do you think you watch too much TV?
Adolescent: Yeah, probably. I watch it when I get home from school and then before I go to bed. There’s usually nothing good on, there’s just nothing else to do.

Physician: You know you watch a lot of TV, but it sounds like it’s out of habit or boredom a lot of the time. Did I hear you correctly?
Adolescent: Yes.

Physician: Would you like to consider reducing your screen time?
Adolescent: Yes.

Physician: Great. Let’s discuss some next steps . . .

Invite adolescent to come back for a planned visit around healthy weight. At this planned visit, the provider would have time to further delve into the spirit of Motivational Interviewing.
How To Elicit Behavior Changes: Questions and Statements

Open-ended:
→ Can you tell me a little more about _____?
→ What things do you do on a regular basis to stay healthy?
→ Can you describe activities that you and your family do that are physically active?
→ What is it like to live with diabetes?
→ If you made the decision to _____, what are the steps you would take?
→ What would be different about your life 3 months down the road if you make (or don’t make) this change?
→ How would you benefit from making a change?
→ Why would you want to _____?
→ Highs & Lows – Explain something that’s really good and something that is bad.

Affirming:
→ I understand how hard it can be to talk about these things and I appreciate you opening up.
→ I think you’re making a great choice in wanting to improve your health.
→ Wow! I’m impressed by your motivation to make some life changes.
→ You’re doing great!

Reflective Listening:
→ You are making legitimate lifestyle changes, but it doesn’t feel like it’s making a difference.
→ You really want to make some changes, but you’re not sure how those changes will fit with your current schedule.
→ It sounds like _____ has actually complicated things.
→ You are very worried about _____.

Summary:
→ Do I understand this correctly?

Focused Advice:
→ Ask permission
→ Do you have any ideas on how to facilitate the change?
→ Some things have worked well for other patients, including _____
→ Gauge client’s reaction: how do you feel about the things we’ve discussed/my advice?
The Readiness Ruler

How Ready Are You To Get More Energy?

Not Ready 0 1 2 3 4 5 6 7 8 9 10 Ready

What would make me more ready? What might my next steps be? What is my plan?

Support Healthy Sleep Patterns with 5210!

1. Bananas contain potassium and magnesium, which are natural muscle relaxants that may help sleep.
2. Watching TV close to bedtime is associated with difficulty falling asleep, anxiety around bedtime and fewer sleeping hours.
3. Engaging in regular physical activity can help develop better sleeping habits.
4. Caffeine and sweetened beverage intake may contribute to difficulty sleeping.

Are your patients aware of what qualifies as adequate sleep?

Lack of sleep is associated with a preference for high calorie dense foods rather than fruits and vegetables.

When children are meeting sufficient sleep requirements, they have less opportunity for screen time in the evenings.

A good night’s sleep may give your body the energy it needs for increased physically activity.

With enough sleep, it may be easier to refrain from those caffeinated or sweetened beverages to stay awake!

Sleep Guidelines for Children:

The American Academy of Pediatrics developed new recommendations to help parents and caregivers manage technology in their children’s lives. It is still important to limit nonproductive screen time and break up time spent sitting during productive time in front of screens, no matter your age.

Since face-to-face interactions promote language development most effectively, the Academy recommends co-viewing with infants and toddlers.

Children over the age of 2 will engage in screen time as fully as they do any other activity. And, like any other activity, it can have its positive and negative effects. So, parents and caregivers should set limits around screen time and be involved in children’s media use, just as they do with other activities.

We should become role models for children, demonstrating the value of productive time spent away from screens. When children practice away-from-screen activities, they have more fun and learn more about navigating in the real world.

The AAP states that the quality of the content is more important than the device or hours of screen time. Rather than just setting a limit of how much screen time children can have, participate with children around recreational screen time.
